

# Justice of the Peace District 5

The information provided on this map was derived from various sources and should not be considered authoritative for engineering, legal and/or other uses. Information obtained from the use of this map should not be used for property boundary resolution. The maps and data provided by the PCJEC are considered "as is" without warranty or any representation of accuracy, timeliness or completeness. The shape and associated data were provided to the PCJEC by the user, and the PCJEC is not responsible for any errors or omissions. The user acknowledges and accepts all inherent limitations of the maps and data, including the fact that the maps and data are dynamic and a constant state of maintenance, correction and revision. Any use of the maps, images, data or content provided by the PCJEC is at the sole risk of the user, and by proceeding, user does hereby agree to indemnify and hold harmless the PCJEC and its member agencies from any and all claims, actions, costs or damages of any nature, asserted by the user or by another arising from the use of the data. The data may have an inherent number of errors which may include but are not limited to the following types of errors:

- 1) Boundary errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 2) Projection errors - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.
- 3) Attribute errors - Database information may be incorrect.
- 4) Labeling errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 5) Completion errors - Data may be missing or data may be included that does not belong.
- 6) Data errors - Data may be missing or data may be included that does not belong.
- 7) Projection errors - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.
- 8) Attribute errors - Database information may be incorrect.
- 9) Labeling errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 10) Data errors - Data may be missing or data may be included that does not belong.

The data may have an inherent number of errors which may include but are not limited to the following types of errors:

- 1) Boundary errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 2) Projection errors - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.
- 3) Attribute errors - Database information may be incorrect.
- 4) Labeling errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 5) Completion errors - Data may be missing or data may be included that does not belong.
- 6) Data errors - Data may be missing or data may be included that does not belong.
- 7) Projection errors - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.
- 8) Attribute errors - Database information may be incorrect.
- 9) Labeling errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input lags real-world changes by varying periods of time.
- 10) Data errors - Data may be missing or data may be included that does not belong.
