

# State Senate District 29

The information provided to you by the Plaquemine County Election Commission ("PCEC") was compiled from various sources and should not be considered authoritative for engineering, surveying, legal and/or other uses. Information obtained from the use of this map should not be used for property boundary resolution. The user acknowledges and accepts all inherent limitations of the maps and data, and represents and warrants that the user will use the maps and data for the purposes intended and will not use the maps and data for any other purpose. The user understands that the maps and data are provided "as is" and that the user will be responsible for any errors or omissions in the maps and data. The user agrees to indemnify and hold harmless the PCEC and its member agencies from any and all claims, actions, costs or damages of any nature, asserted by the user or by another arising from the use of the data. The PCEC provides no warranties, expressed or implied, concerning the accuracy, completeness or reliability of the data for any other particular use. Furthermore, the PCEC and its member agencies assume no liability whatsoever associated with the use or misuse of such data.

a) Spatial errors - The areas depicted by these maps are approximate and are not necessarily accurate to surveying or engineering standards. XY coordinates may be in error by several feet or more.  
b) Registration errors - GIS data layers may not overlay each other correctly.  
c) Accuracy errors - GIS data layers, databases and documents may not be the most current available or may not depict the specified time. All data is subject to constant change. Data input tags real-world changes by varying periods of time.  
d) Currency errors - Data may be missing or data may be included that does not belong.  
e) Completeness errors - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.  
f) Projection distortion - All map projections introduce distortion by representing the irregular shape of the earth's surface on flat maps. This affects feature shapes and map distances.
